Escaping from the Doctor's house Erasmus meeting. March 7, 2024

Welcome to the Doctor's house

If you want to escape, three secret numbers you must find. Remember: it is very important to follow the correct order of the clues.

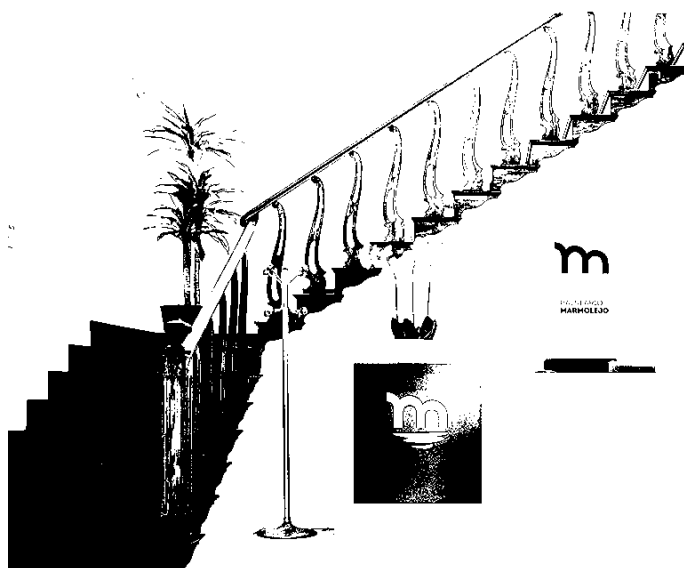

Do you want to start the game? Here, you have the first clue:

Everything and nothing is invisible to our eyes. Find the numbers and put them in the correct order. Only, in this way, you will know the first number of the combination which let you to scape. Take care with the order and positions of the numbers.... What may help you to find the invisible things?.

$$(1st \times 3rd) - \frac{2nd}{4th} = (\times) - _ =$$

Find the first number obtained from the equation (sum up everything up to obtaining just one number),

and go on, looking for a second number of the clue in order to escape.

The pieces of a puzzle you must find now... look for them, create the puzzle and go on... just remember... just the essential things turns into invisible ones ... once again.

The second number you are looking for, is the result of the sum obtained with the numbers of the date when our famous waters were declared 'mineral - medical ones'. Just, find them, sum these ones, and leave only one digit as a result.

Once you get the second number of the clue, look for the quizzes and their solutions... when you finish them, we will make sure they are correct ... and you will be given the third and last number!

Congratulations! Time for going out! (Time for escaping from here!)
